Start Autocad and change the viewing mode to "Print." Open the.awd file. Click in the application window, select the "Export" option. A new window opens up. You will see the status of the process. Close the new window. Click "Export." A new window opens. You will see the export settings. Click the "OK" button. You will see the export settings in the upper left corner. Click the "Export" button. Select the destination file. You can export to.CAD files or to.PDF files. To export.CAD files, you must convert the file into a DWG file before export. To export.PDF files, you can select the file type as PDF (Portable Document Format). Save the file as.pdf,.Dwg or.cad. When exporting a file you must export each part as a separate file. To export each part separately, you must create a new sheet for each part. Each part must be named according to the part number. E.g., if you have a part number of 1003, then the sheet name is a 3 digit number (013). Once you export, you can later view your drawing using Autocad viewer. To see your drawing using Autocad viewer, you can add a new drawing to a folder on your system. You can then open the.pdf file using Autocad viewer and play with your model. For example, the above example drawing can be exported to a.pdf file using the above steps. If you have another drawing or model, then you can add it to the existing folder on your system. In the new folder, you will find the exported drawing (.pdf file). You can open this drawing using Autocad viewer. If you are using an external router and if your router allows multiple sub-networks, then there is a possibility that your router will refuse to open multiple sub-networks. This problem can be overcome if you have a router with multi-port. E.g., the Fast Ethernet is a standard port; the RJ45 Ethernet is a standard port; the WLAN is a non-standard port. You can use the following steps to make your router to support multiple sub-networks. The steps are as follows:
