KEYMACRO is a utility designed to simplify the process of key press repetition in Command Prompt (cmd.exe) and in the DOS shell of Windows NT/XP. KEYMACRO can be used with keyboard controllers that have only one key to be pressed (PnP keyboard controllers). One of the first things you need to know about the KEYMACRO software is that it is a Windows software product and works only in a Windows operating system. In addition, it can be used in Windows NT/XP/7/8/Vista and only if the operating system is in the English language. The KEYMACRO software has a very simple interface. It consists of a toolbar at the top of the main window where the settings and controls are located. Here, you will find a menu with all the functions of the program. It is possible to launch and modify the parameters of the programs using this menu. The top of the window is split between the status bar and the graphic representation of the keyboard. When you are pressing the keys, the status bar displays which keys are being pressed. On the left of the window, you can see the main window. Inside this window, you can see the main form, the command line and the scanning area. The main window is divided into two sections: one is the scan area and the other one is the command line. The scan area is where the files will be scanned and saved and the command line is where the instructions will be shown. The scan area of the main window can be split in four columns and the scanning area occupies the fourth column of the window. The columns are occupied by buttons for choosing various functions and pages. Here you can choose whether to scan with or without shadow and whether to scan in grayscale or in color. In addition, you can choose the margins and file size, among others. The main window also has an option bar where you can choose the settings of the program. It includes parameters that allow you to choose the color palette, the number of pages to be scanned, the number of scans to save and the margins, among other options. Before you press the buttons to scan, the program prompts you to confirm the settings. If you press the OK button, the program begins scanning and continues by asking you to choose the language of the program. You can press the STOP button to cancel the program, in case you want to scan a different file. If you want to scan the same file more than once, you 1d6a3396d6
