Faster performance with improved memory management Integrated support for three systems (KP, KP Planets, KP Charts, KP Elements) Group Planet Charms Fixes and improvements for BUGs and WISHES Added a new 'Placidus Charts' setting! Added option to use the Zodiac of your location (US, India, Hebrew, etc) Added new view option for planetary astrology with a link to KPCharts app Added support for Indian Horoscopes and a new/updated KP Indian Charts Settings KP provides a comprehensive system of India's position in the astrological system KP is calculated for the time of your birth and the time of the tarot reading KP aims to increase the reliability of your horoscope! Why use KP? KP aims to increase the reliability of the astrological profile: KP takes the subjective views of astrologers and brings them down to earth. KP creates a more measurable set of results than either Vedic or Western astrology. It also follows the same approach as Vedic astrology. Every planet, direction, element, and aspect is constantly moving to find its optimal placement. The position of planets and constellations is influenced by many events, so the planets do not follow a straight path but rather a curved line. Focus on aspects only KP is a planetary system, in which aspects are the only thing that affects the aspectee. Other influence factors (Eclipses, Jyotish, Rahu Kaal, Hora, Dewa etc.) are not included in KP. KP is on a deeper level and requires more study than Western Astrology. If you want to enjoy the benefits of astrology, but on the simplest level, check out our FREE Placidus Charts APP: Period Settings: Divisions for House Placements: Period settings in the Client Manager should be synchronized with the settings in the PadaPaala settings located at the

Calisun a.k.a. Team CaliSun is an open-source OpenStreetMap web-mapping application mainly based on HTML5, CSS3 and JavaScript. In addition to open-source, CaliSun is also distributed as a gtk2+-style theme which is based on the Caligra Engine. There are many features in the CaliSun Map in general, such as: * ability to embed images using the OpenStreetMap style (like those shown in the ning demo) * the ability to add POI:s (Point of Interest) and routes (areas where people tend to travel and where important landmarks (hospitals, schools, etc.) are found) * filtering methods for easy search - for example "Show Sights" using an interactive map with the ability to add markers (POI) to it. * a post-processing technique called "shadow-masking" * access to the OSM API * the ability to export map data in several different formats: SVG (vector), GeoTIFF, KMZ, GEORSS, CSV, GPX, DWG, DXF, TIFF, PBF, and ESRI Shapefile. And much more...! After completing each project, CaliSun will host a repository, including the GIT repo of the development platform, the CSS, and the different project files (map files and source code) on Sourceforge. * Google Polyline API is a Java library that allows you to retrieve
