
BS 8081:1989 Code Of Practice For Ground Anchorages pdf Fixed

[Download](#)

British Standard Code for Ground Fixings, BS 8081 Code for Ground Fixings fd16d57201. Analyzing and systematizing the information received from Ukrainian manufacturers on the use of n=1-tiers as fasteners on a water tower, it should be noted that the requirements of Ukrainian sets of rules for the use of n= 1-tiers as fasteners (in terms of other parameters) comply with the mandatory requirement of EN 176:2002. In accordance with the requirements of this standard, neither at the level of design features, nor at the stage of load calculation, nor even at the design stage, any modifications of structures are allowed, using the methods of fastening n = -tiers, during construction or operation. Thus, in accordance with the provisions of the EN 175:2002 standard, a steel strip (for n=81) with a diameter of 22 mm, a thickness of 4 mm and a thickness of 7 mm must be tested for strength on a special press with a test vertical load of 25 tf. The limiting value of the working load on horizontal and vertical fastening elements is 23 tf, for a horizontal tape - 22 tf and 25 t. For a vertical tape, a diameter of 20 mm, a thickness of 8 mm and a thickness of 7 mm and for a vertical 1.8 mm and 1.5 mm respectively. Drives of pipelayers of the German company Weiler, for example, produced since 2008, do not have any fixtures for fastening n = - shooting ranges, therefore, the use of this type of fastening as clamps for fastening horizontal pipes fits into the concept of a tower construction project. The use of steel tapes with a diameter of 22 mm, thickness, both in the 374th and 1196th standards, is real, because. such tapes are widely used in construction, especially when laying wells. But at the same time, it should be noted that the FSB standards do not regulate the use of steel tapes with a thickness of more than 5.5 mm, with a washer of at least 3 mm, as a temporary fastening of a horizontal pipeline. In view of the above, the main requirement of the FS 48 standard, in terms of fastening with n \u003d wires, is the observance of the following conditions: 1) the type of container used n=- must comply with the recommendation of FS 49; 2) the use of n= shooting ranges of the "VSD-Lilienta" type is not allowed; 3) use of steel n= containers type VSL-Lindent for fixing work N= dash type "Li
