When my php script is done, I would like to send that data back to my javascript. I am doing this in PHP, as an array can't be passed back to javascript. I would like to do something like this in my javascript: \$.ajax({ type: "GET",

### What's New in the?

Download the widget, drag the "y=box" to your desktop and change the size to the size you like. The widget will appear on your desktop as soon as you drag the "y=box" on your desktop. With Windows notifying you of system events and InfoBar widget opens the first tab by default. Any and all changes made to the widgets Settings are saved back to the widget and will appear next time you open it. To uninstall the widget delete it from the desktop. To delete: Right click on the yellow icon (x=box) and select "Delete". Press the "Delete" key on your keyboard to finish the process. How to: Open the widget by double clicking on the yellow bar that was placed on your desktop. To close the widget: Click the home button (a.k.a green arrow). To change the size of the widget: Right click on the yellow icon (x=box) and select "Change size". Or click the "Change size" button on the icon bar. How to: Double click the Home button to open the "Settings" tab. Configure the InfoBar widget by clicking "Settings". To change: Clicking the radio button to the left of "Fast", Makes the widget open faster. Clicking the radio button to the right of "Slow". Slows down the widget.
