She was playing a private show because the date had been blocked off to her fans. When we entered the club to see her, her tour manager was there signing for us and he let it slip that Lorde was playing the Blues in his hometown Atlanta. Excited (understandably so), we headed out to make the most of the opportunity. When we arrived, the venue was being adorned with her face on everything and she was being featured all around. When she came out, the place erupted with cheers and screams. She was wearing a baller striped dress and I was beyond excited. She was playing some new songs, the last two were 'Homemade Dynamite' and 'Green Light'. The fans loved her music and she was up for the task. I wasn't disappointed. She is amazing live. Lorde (from left) is in a honey moon phase with her baby, her dogs, her vintage car, and a few other things. If you're reading this and you're a Lorde fan, there's no need to buy the album. This is a must see concert. Here's a link to her song 'Green Light'.Dip-pen nanolithography: A nanofabrication method using imaged electromechanical probe and laser writing. A liquid-based dip-pen nanolithography (DPN) method employing an improved lithography probe and laser scanning to fabricate nanostructures is presented in this work. In order to obtain highly accurate nanofabrication with a high resolution, a piezoelectric actuator (PZA) is integrated with the probe tip to provide

distribution variability of
bacterial phyla in the upper 1-
to 2-m of an Ohio wetland.
Understanding the mechanisms
driving local variation in
bacterial community structure
within and between ecosystems

is one of the primary goals of ecological research. A unique wetland ecosystem, the Big Beaver Muck Ecosystem, was explored to determine the effects of precipitation and salinity on bacterial community structure and the extent to which differing levels of precipitation and salinity result in significant spatial variation in community structure. The

upper layer of the wetland (2-m depth) was characterized by low nutrient and high $(\text{NH}_4)_2\text{SO}_4$ concentrations. For the upper layer, only the percent distribution of the bacterial phyla varied with depth and distance, with results indicating a reduction in bacterial abundance with distance from the shore. In the lower layer (8-m depth), all of

the taxonomic groups showed variability with distance 1cdb36666d

Would you like to read the author, Remu "Ramesh Babu" or associated with the author?The invention concerns a television system and a processing circuit for driving a set of speakers in a television set. Television sets and in particular television sets which include loudspeakers to amplify and project the sound signal received by the television receiver to a user, are known. It is also known to detect the on-screen sound signal and to project this signal to the television set's loudspeakers for later replay and processing. This type of video sound system is referred to as an audio information system. Such audio information systems provide many advantages. It is desirable to provide an audio information system in a television set for convenience, cost, and for other reasons. Known prior art audio information systems use analog sound information to drive the loudspeakers. For example, the sound information may be provided by an RCA cable. An amplifier section of a

television set's audio system may process the sound signal and provide an amplified output signal to a section of the television set. The amplified signal is transmitted to loudspeakers. In conventional television sets, the loudness of the sound signal may be of importance to the user. Some televisions have loudness control buttons or controls. The control allows the user to adjust the sound volume for the television to provide the desired sound level. Typically, the television set's sound volume is set at an acceptable level and the loudness control is set to maximum to provide the volume. The loudness control is not adjusted by the user and does not allow adjustment of the sound volume for the television set based on the level of the sound information. Many known audio information systems provide various sound effects. Such known sound effects are provided by a sound program stored in a memory. The sound program includes a sequence
