There are two principal types of CAD software: ● Drafting and design software ● Construction and management software

Drafting and design software includes architectural design software, mechanical engineering software, graphic design software and many others. Construction and management software includes Civil, Electrical, Plumbing, Structural, Mechanical and other types of software used in the construction industry. AutoCAD is mainly designed for 2D drafting and 2D design, but it is capable of handling 3D CAD as well as surface-modeling (topography), parametric modeling, computational geometry, and mathematical modeling. In AutoCAD drafting, the designer uses a mouse to draw 2D or 3D objects. Various features, such as Auto-Trace and snap to fit, make it easier to select the objects, as well as to align multiple objects. The user can manipulate the drawing by rotating, flipping, moving, and scaling it. The AutoCAD drafting capability allows the user to draw objects by filling a drawing with polylines (linear objects), arcs and circles (curves), text, splines, and solids (3D objects). Another feature of the software is called lint. It is a simple tool that allows the designer to draw an object on the screen without having to first draw a polyline to define it. Lint allows for very quick sketching of objects. For example, by using lint to create a circle, the user can quickly draw multiple circles to define a circle, as well as rotate, resize, and change the fill color of the circle. The lint tool also allows the user to draw lines and arcs or circles. In the ArchiCAD suite, the lint tool can be enabled within a specific drawing or drawing set. This enables a drawing to be created within a drawing set (drawing group) that does not use the individual drawing tool of lint. This also means that each lint drawing can be recalled to modify the original drawing by clicking the lint tool button and then clicking the location of the drawing (in the drawing set or drawing). The drawing of elements such as circles, arcs, lines, polygons, or splines can be used to create more complex 2D or 3D objects such as boxes, blobs, lines, triangles, cylinders, cones, spheres, clouds, text, and many others. The engineer can then organize the objects into groups

Interfaces to external programs In addition to the C++ class library, Autodesk has used ObjectARX as an interface to external programs. Some examples are: Intergraph's Inventor script language, which was used to drive AutoCAD's CAD/CAM systems (now owned by Dassault Systemes). This is also the basis for the Inventor for AutoCAD plugin. GDS 2.0 for SAP which was used to drive AutoCAD's 2D and 3D DWG editing systems. Intergraph's Win-RAD, a native RAD for AutoCAD (later called Intergraph's iCAD) Macromedia's Flash MX and Flash IDE development environment for AutoCAD In many cases these tools share the same interface with AutoCAD. In addition, there are a number of independent plugins available which add specific functionality: Datasheet Import/Export, which converts DXF and DGN files to and from paper datasheets. It is also the basis for the existing AutoCAD Paper Datasheet plug-in. Technical Interoperability, for communicating with hardware components such as 3D printers. This is also available as a plug-in. Visualization, the Visual LISP plug-in, which contains code to control and animate 2D and 3D visualizations. Adobe and Autodesk announced an agreement for Autodesk to become a distributor of Adobe Photoshop, Adobe Illustrator and Adobe Premiere Pro. Major features Various features are available in the latest Autodesk products: Binary formats AutoCAD 2008 and above are released on DVD and Windows only. Prior to 2008, AutoCAD was available as a CD-ROM with installation files or as a single 2.6 gigabyte installation file. AutoCAD 2010 introduced multiuser capabilities, including the ability to save drawings and project files, and send them to multiple other users. AutoCAD 2011 added the ability to draw with text and other filaments, including laser-cut PVC film. AutoCAD 2012 introduced Advanced Filter, a feature which allows an AutoCAD user to instantly filter his drawing according to the selected objects' characteristics, e.g. color, size, area, etc. AutoCAD 2013 also introduced the ability to draw complex curves and splines with the spline interpolation af5dca3d97

WILLIAM D. CONKLING, DEFENDANT. Supreme Court of United States. *550 It was argued by Mr. Niles, for the plaintiff in error, and Mr. Bibb, (Attorney-General,) for the defendant in error. Mr. Justice CATRON delivered the opinion of the court. In this case we have before us the fourth charge of error, which presents the question, whether the court erred in overruling a demurrer to a supplemental petition in the declaration. On the 10th of June, 1841, the plaintiff, as owner of the brig Lina, sold it to the defendant, for the sum of \$3,000, at Charleston, and the said vessel was delivered to the defendant on the 3d of October following, and at the same time the defendant agreed to pay the plaintiff the money for said vessel, one-half of which sum was payable in cash, the other half being payable in cotton, and on account of the cotton to be deposited by the defendant in a bank, until it was sold and the price of the cotton deducted, and he, the said defendant, did then and there give the plaintiff his bond to the amount of the debt, with sureties to be approved by the court. The plaintiff deposited with the defendant the bond, or its
