I have an obstacle and the obstacle is locked when a certain value is reached. My problem is that when the obstacle is clicked the input to the new game is the value. I want to pass the value that is currently in use as the score. Any help with this would be great! A: Use a global variable and `gameObject.SetActive` to set the obstacle inactive. Use a global variable for the score. When you have a new game, just put the `gameObject.SetActive` of the obstacle to false to make the obstacle inactive. When the obstacle is completely off, `gameObject.SetActive = false`; When the obstacle is ready, add the score value to

the global variable. Make the obstacle active. Use the global variable to update the obstacles on screen position. (You can use it to create a moving obstacle along the score.) Q: Including a OneToOne relationship in a form multiple choice field I'm working on a recipe app and am having a bit of an issue getting the right choice for the cook. The model is: class Recipe(models.Model): author = models.ForeignKey('auth.User') cook = models.ForeignKey('auth.User') title = models.CharField(max_length=255) ingredients = models.ManyToManyField(RecipeIngredient, blank=True, through='RecipeIngredientRelation') RecipeIngredient is just a normal model, but the cook and author will be in the template. The relation is 6d1f23a050
