Indeed, while Microsoft Flight Simulator X is perhaps the platform that shows the gateways to the virtual world, it is the add-ons that hold the keys to opening them and truly exploring what lies beyond each one. Such is the beauty of flight simulation and the details and data these add-ons provide, that the experiences are potentially endless and leave the pilot with a plethora of opportunities to choose from. I felt the same way when I played the game and was really amazed at the graphics and realism. DCS is amazing, and it is incredible. I used to fly fast jets and simulators but DCS World is as close as you can get without flying an actual plane. The more I played the more I liked it. I find this kind of strategy interesting and it had me glued to my screen for hours. I liked getting inside the game, trying out the different variations on your flight plan, and seeing what worked and what didn't. I was getting into aircraft flying and felt like I was developing a level of skill I had never before obtained. DCS World has developed itself to become the most realistic flight

simulator that is available. It keeps you focused on the task at hand, and that's what makes DCS World one of the most complete flight simulation products in the market. It gives you the ultimate opportunity to become the captain of your aircraft, wherever you are, whenever you want. Since I've only started playing I only have one thing to say: it is the most realistic flight simulator that is out there. From the menus, to the auto land, to the different airports there is nothing I've found that is a close second.
