I use Photoshop Sketch for doing quick and dirty work--quick character sketches, quick \"I'm at a game or event\" quick frame work and other snap shots that I just pull out and quick and dirty is all this application is great for. The current versions of Adobe Creative Cloud are a complete reimagining of the programs that last generation of designers were accustomed to. I never thought that putting a Wacom tablet on my computer, it would be a wise idea. I made some research on my own after Adobe introduced this feature. A lot of people had nothing but negative things to say about that, so I was not sure if I would like this. But, the pros really outweighed the cons and this is now a must-have feature for me. And for me this is what makes this whole tool and Photoshop special. A sense of direction, an ability to learn the various tools, and an ability to organize your photos and put them all together. However, the ability to share it in social networks is still limited. But, with the recent note of Adobe's activity with sharing and the lowering of prices for the full Personal Cloud Studio 5 bundle, it seems that more and more companies are going to launch their own apps, including Photoshop. And this of course makes sense. What most people do not realize is that this feature of Adobe is not limited to just sharing your content.

Adobe has announced the release of two new features for Photoshop:

1. The new feature called “Smart Scan” is a new content-aware technology that promises to accurately select the “most important” piece of a scanned image and automatically detect other content in the image.
2. The second new feature is “Live Mask.” It is a new utility for editing and deleting layers in images.

Adobe has added three brand new features to Adobe Photography Plan, the photography subscription service that allows professional and amateur photographers to get unlimited access to Adobe’s creative content.

1. “Drag and drop to create and save RAW processing presets.”
2. “Mobile design with real-time strokes.”
3. “Multiply photo apps.”

On Photoshop Elements, updates include a machine learning-powered mobile scanner that intelligently identifies and extracts the most important aspect of an image, for content-aware retouching. The new feature is called ‘Smart Scan,’ and allows users to rapidly enhance a scanned document with captioned border vignettes and other frame adjustments. And the desktop version of Photoshop Elements gains a new feature called Live Mask that simplifies the process of selectively removing objects, photos, or layer masks in an image.
