We can set the position of these shapes with the help of the guides that distribute space evenly. The Layers panel lets you keep information separate and organized for effective image editing. To support the new content replacement feature, the new Content-Aware workflow opts into the new expression engine, which can:

- Perform real-time content-aware corrections in previews and documents.
- Share previews using Creative Cloud.
- Automatically produce image adjustments and export them for use in other applications.

The most powerful feature in Photoshop CC is the new Content-Aware tool. It allows you to quickly find and fix areas in your photos that you deem undesirable, whether they're features like a hat or eyes or sections that have been cut off, or important objects like a cat or a person that might need to be replaced. Using the new Content-Aware technology, you can select an area in your photo (or on another area of the same image) and replace it with something else. Photoshop allows you to replace the area by simply using the new Replace Content tool. You can use any kind of content in Photoshop: a photo, a layer, or even another selection using Content-Aware Replace. Finding and replacing contents can be as easy or as difficult as you need. For example, if you determine that you need to cut out a person from your photo, you can use the Eraser tool to erase that area using a brush. You can also select a new layer, and place content on top using the Place tool, a brush, or any other tool that you like. Just keep in mind that any new content whether a layer, an area selection or a photo will be based on your current selection, so being very accurate is a key part of creating seamless content-replacement.
