In which cases should I use hibernate and in which one should I use plain JDBC? A: Hibernate is an ORM that uses transactions, so that it can persist and update the data in a database when changes are made. It is in this way more powerful than JDBC. There are less rules to learn and be aware of, for example when using JDBC you must handle resultsets, results, iterators, connections, locks, etc... Hibernate handles all of this for you. So if you work with

more relational databases and if you deal with those more complex functionalities, Hibernate is a good choice. However, if you're just starting with Java and you don't have experience with relational databases, Hibernate may be a bit too heavy and probably overkill for your project. The documentation of Hibernate is a good place to start, and if you search for information on the subject you'll find tons of interesting links. Can gabapentin or pregabalin improve pain in postherpetic neuralgia? Postherpetic neuralgia (PHN) is one of the most common neuropathic pain conditions. Gabapentin and pregabalin have been widely used to treat PHN with promising results. The aim of the present study was to systematically review all randomized, double-blind, placebo-controlled studies that compared gabapentin and pregabalin with either placebo or a different drug in patients with PHN. We systematically searched PubMed, OVID MEDLINE, Scopus and Cochrane Central databases up to June 2009. All studies that compared gabapentin or pregabalin with placebo in patients with PHN were selected and analyzed according to patient population, study design

and methodological quality. Eleven eligible trials were included in the review. The methodological quality of the trials that compared g
